

In the Specification:

Please replace the following amended paragraphs:

Page 16, lines 17 to 22, insert the following paragraph:

In accordance with the invention, the torsionally rigid member 12 has its respective-opposed ends mounted rigidly to the corresponding ends of the pair of leaf springs 1, so that there is no movement therebetween, however small, during use of the suspension, particularly during vehicle roll. With reference to the figures, this mounting of the member 12 to the leaf springs is its only connection to the vehicle chassis on which the springs are installed.
